

PRODUCTS & SERVICES | VOLICO CROSS CONNECTS

We are carrier neutral and can provide affordable cross connects to any carrier in our facilities or nearby data centers.

Volico Data Centers offers interconnection services to leading telecommunications carriers, ISPs, and content providers through cross connections at our strategically located, carrier-neutral interconnection facilities. We make interconnection simple and provide reliable connectivity options to support both your network and business needs.

Cross Connect Primary Benefits:

Latency Reduction

Cross connect services reduce latency by sending cross connects to the servers and ISPs serving a company's end-users in the same building.

Disaster Recovery

Cross connect services offer increased network reliability as a direct result of the improved disaster recovery rates associated with cross connection.

Global Networking

Cross connect services offer advantages in redundancy and pricing through connections with multiple global networks.

Traffic Flow Management

Cross connect services enable companies to better monitor and manage traffic exchange between data centers.
